QUANTITATIVE RISK ANALYST | MARKET RISK | DERIVATIVES
EXPERIENCE: 4 years.

Quantitative Risk Analyst with 4 years of experience in market risk, derivatives valuation, and trading analytics within investment banking environments. Strong expertise in PnL analysis, VaR, ES, sensitivities, market and counterparty risk, with hands-on experience using Python, SQL, and Power BI. Proven ability to collaborate with Front Office, Risk, and IT teams to deliver scalable risk solutions and automation tools.

Professional Experience

Senior Consultant.

Accenture (contractor) / January 2026 – Present.

→ Project: Murex FRTB circuit / Tier 1 Bank..

- Validation and analysis of market risk metrics and valuation impacts of new derivatives products under the FRTB SA framework.
- Automated risk validation and reporting processes in Python + Streamlit, improving efficiency of market risk analysis workflows.

NFQ Advisory Services. Madrid / January 2022 – December 2025.

→ Project: Market Risk / Methodology Santander CIB.

- Developed and implemented a Python-based solution to detect and correct arbitrage violations in FX volatility surfaces, enhancing pricing stability and data consistency.
- Performed market risk analysis on derivatives portfolios through historical simulations, VaR & ES calculations and sensitivity/greeks analysis to monitor trading exposure and quantify the solutions impact on portfolio risk and P&L.
- Analyzed P&L and market risk sensitivities under stress scenarios to assess the impact of volatility movements on trading positions.
- Collaborated with IT and Risk teams to implement pricing and risk methodologies within the bank's risk management infrastructure.
- Used Murex FO and Risk tools for derivatives valuation and used black scholes modelling in python to validate results.

→ Project: Counterparty credit risk Santander CIB.

- Led the Python automation of validation and monitoring processes for advanced counterparty risk metrics (CVA, DVA, PFE, MtM).
- Interacted regularly with FO and risk stakeholders to explain valuation changes, reconcile P&L drivers, and support risk control.
- Built interactive dashboards with Power BI to monitor counterparty risk metrics, and validation complementing with a fully automated SQL pipeline for data enrichment.
- Performed monthly counterparty risk reviews, trade perimeter checks, and regulatory stress testing and Wrong-Way Risk.

→ NFQ: Quant Cluster. Internship.

- Developed a python Notebook bond pricer for fixed and floating coupons

BANCO DE ESPAÑA. Research Assistant Intern. Madrid / April 2021 – September 2021.

→ Research assistant intern / Monetary Macroeconomics and Finance department.

- Performed data aggregation and analysis using SQL and Python.

Education

May 2025 – GARP – FRM Level 1 passed. [FRM 1 credential](#). Level II Candidate.

2021-2022 – AFI Escuela de Finanzas – Master's in Data Science & Big Data
